Xilinx Zynq-7000 EPP
An Extensible Processing Platform Family
Vidya Rajagopalan, Vamsi Boppana, Sandeep Dutta, Brad Taylor, Ralph Wittig
August 18, 2011
Agenda

- Xilinx Series 7 Highlights
- Zynq-7000 EPP Architecture & Silicon
- Zynq-7000 Software & Applications
- Summary
Xilinx 7 Series Highlights

- **7 Series silicon devices**
  - 28 nm Technology, TSMC HPL process
  - 50% reduction in power over 40 nm devices

- **3 FPGA Fabrics**
  - Artix = Low cost, low power FPGA (“1W FPGA”)
  - Kintex = Density & performance FPGA (“Market Sweet spot”)
  - Virtex = Highest density and performance FPGA (“More than Moore”)

- **‘More than Moore’ density increase**
  - Up to 2M logic cells
  - Using Stacked Silicon Interconnect Technology (SSIT)

- **Improved GT bandwidth**
  - GT bandwidth increased to 28 GHz

- **Zynq Embedded Processing Platform (EPP)**
More Than Moore
Xilinx Stacked Silicon Interconnect Technology

- **Microbumps**
  - Access to power / ground / IOs
  - Access to logic regions

- **Through-silicon Vias (TSV)**
  - Only bridge power / ground / IOs to C4 bumps
  - Coarse pitch, low density aids manufacturability
  - Etch process (not laser drilled)

- **Passive Silicon Interposer (65nm Generation)**
  - 4 conventional metal layers connect micro bumps & TSVs
  - No transistors means low risk and no TSV induced performance degradation

- **Side-by-Side Die Layout**
  - Minimal heat flux issues
  - Minimal design tool flow impact

- **Silicon Interposer**
- Through-Silicon Vias
- C4 Bumps
- BGA Balls
# Agenda

- Xilinx Series 7 Highlights
- Zynq-7000 EPP Architecture & Silicon
- Zynq-7000 Software & Applications
- Summary
Zynq-7020 Device

- **Processor System (PS)**
  - ARM Cortex-A9 MPcore
  - Standard Peripherals
  - 32-bit DDR3 / LPDDR2 controller
  - 54 Multi-Use IOs
  - 73 DDR IOs

- **Programmable Logic (PL)**
  - 85 K Logic Cells
  - 106K FFs
  - 140 32-Kb Block RAM
  - 220 DSP Blocks
  - Dual 12-bit ADC
  - Secure configuration engine
  - 4 Clock Management Tiles
  - 200 Select IO (1.2-3.3V)

### Programmable Logic

| Approximate ASIC Gates | ~430K (30k LC) | ~1.3M (85k LC) | ~1.9M (125k LC) | ~3.5M (235k LC) |
| Extensible Block RAM | 240KB | 560KB | 1,060KB | 1,860KB |
| Peak DSP Performance (Symmetric FIR) | 58 GMACS | 158 GMACS | 480 GMACS | 912 GMACS |
| PCI Express® (Root Complex or Endpoint) | - | Gen2 x4 | Gen2 x8 |
| Agile Mixed Signal (XADC) | 2x 12bit 1Mmps A/D Converter |

### I/O

| Processor System IO | 130 |
| Multi Standards 3.3V IO | 100 | 200 | 100 | 200 |
| Multi Standards High Performance 1.8V IO | - | - | 150 | 150 |
| Multi Gigabit Transceivers | - | - | 4 | 12 |
Zynq-7000 Processor System (PS)

- Dual Core Cortex ARM A9
  - NEON, 512 KB L2 cache
  - 256 KB On-Chip-Memory (OCM)
- DDR Interface
  - DDR3 Performance
  - High BW utilization
- Config & Legacy Memory I/F
  - Quad-SPI, NOR, NAND
- Standard Peripherals – GigE ...
  - Available to PS IO or to Programmable Logic
- System Level Peripherals
  - Clock generation, Counter Timers
  - 8 Channel DMA controller
  - Coresight Debugging
Zynq-7000 Programmable Logic (PL)

- **Programmable Logic Resources**
  - 30K – 235 K Logic Cells
  - Dedicated 36 K-bit BRAMs, DSP, CMT
  - XADC dual channel 12-bit ADC
  - Up to 12 GTs with PCIe hard core
  - Up to 300 Select IOs

- **Programmable Logic AXI Interfaces**
  - Multiple 32/64 bit AXI interfaces to PL
  - Accelerator Coherency Port (ACP) with access to caches

- **Programmable Logic System Interfaces**
  - Interrupts, DMA control
  - Debug

- **High Performance PL Configuration**
  - Security Decryption Engine
  - Under 200 ms configuration time from flash
  - Debugging interfaces
Customizing Zynq
Tools for the Programmable Logic System Builder

- **Clocking**
  - Flexible clock sources (PS or PL)
  - Simple clock interfaces

- **Memory and Peripheral access**
  - PL access to all memory: Caches, OCM, DDR
  - 2 dedicated DDR ports ensure bandwidth
  - PL access to all peripherals in PS

- **Interconnect**
  - AXI Interconnect IP available from Xilinx
  - Optimized for FPGA implementation

- **Debug and Misc.**
  - Bidirectional cross-triggers (Coresight and Chipscope)
  - 16 general purpose interrupts from PL to PS
SW user experience:
SoC with integrated PL

- Configure PL (full and partial)
- Start/stop & single step clocks
- Setup & update HW triggers
- Monitor HW performance counters
- Observe & sync to PL hardware events
Zynq-7000 Power Saving Features

- Low power 1.0V HPL 28 nm process silicon technology
- Programmable Logic can be powered off and on as needed
  - 40-90% reduction in static power depending on device
  - Very fast configuration times when loaded from DRAM
- Low power ARM Cortex-A9 MP
  - Incorporates clock gating and power-down modes
- Support for LPDDR2 devices
  - Ultra low power self refresh
- Peripherals shutdown
Engineering Insights
Process Selection Criteria

Process Considerations:
- **28 HP**: Highest Performance HKMG Process (but must be able to afford power; e.g. GPU)
- **28 HPL**: Low power HKMG process (shifts down HP power / performance range)
- **28 LP**: No HKMG low power process (cheaper than HPL, but less performance)

Xilinx’ Reasons for Selecting HPL:
- Higher performance than LP (at same power level)
- Higher performance vs HP at FPGA TDP (or lower power at same performance)
Normalized Power vs. Frequency

Agenda

- Xilinx Series 7 Highlights
- Zynq-7000 EPP Architecture & Silicon
- Zynq-7000 Software & Applications
- Summary
Zynq-7000 Use Cases

**Use Case #1**
Access peripheral configuration registers

**Use Case #2**
Access datapath configuration registers
Access datapath memory (coefficient tables)

**Use Case #3**
Low latency/high bandwidth shared work spaces
Move data between SW and HW domains
Application Programming Using Only C

Application
C/C++

High-Level Synthesis
via AutoESL

Device Information

Binary for CPU

Bitstream for PL fabric

SW-Centric Design Environment

AutoESL Generated Accelerators
C-Based, High-Level Synthesis Tools at Xilinx

Application Example:
Back Projection Algorithm (recreate CT scan images from samples)

- 52 Floating Point Operators @ 200Mhz
- Fits in lowest cost Zynq 7010 device
- 3X Performance vs SW only

**gprof**
Locate SW hot spot function(s) on ARM

**AutoESL**
Synthesize hot spot function(s) to HW/PL
- Using CPU Programmed IO
- IO dominates accelerator compute time
• Using DMA
• DMA setup time dominates (white space between green bars)
Multicore programming models being ported to Zynq
Agenda

- Xilinx Series 7 Highlights
- Zynq 7000 EPP Architecture & Silicon
- Zynq 7000 Software & Applications
- Summary
Summary

- Zynq SoC Device Family with Integrated Programmable Logic
- $15 Price Point* / 28nm Fab Process
- Microcontroller and Accelerator Use Models
- Industry Standard Tools (ARM Ecosystem, Android, ISE)
- Emerging Tools (AutoESL, Multicore)
- Emulation platforms in use for prototyping
- Available 1H 2012

* High volume price for smallest device and package, slowest speed grade
